EXTENT OF OBSERVATION - Bonee Gulch was surveyed on foot by Kevin Rockwood on 4/14/66.

LOCATION - It enters Greenwood Creek just south of Elk.

RELATION TO OTHER WATERS - This intermittent tributary to Greenwood Gulch lacks significance as a spawning or nursery area to anadromous fish due to:

- (1) Lack of flow. The stream is dry during the summer and fall.
- (2) Barriers:
 - (a) A log jam at the mouth causes falls 3 feet high.
 - (b) The culvert under Highway 1. Water flows 15 feet over flat concrete at a 60 degree angle with water spreading out to a 1/2" flow.

GENERAL DESCRIPTION - Bonee Gulch is 2 feet wide, 4 inches deep as it flows through a V-shaped gulch. The stream banks are choked with brush, making it difficult to walk through.

K. Rockwood
4/25/66
